	Maha	raja Ranjit Singh College of Professional Sciences, Indore
		Department of Biosciences
		Lesson Plan - M. Sc. I Biotechnology (July 2020 -Dec 2020)
		Subject - Biochemistry
		Teacher - Dr. Sadhna Nighojkar
Day/Lecture	Unit	Торіс
1		Amino acids-Structure and functional group properties
2		Amino acids-Structure and functional group properties
3		Peptides and covalent structure of proteins
4		Elucidation of primary and higher order structures
5		Elucidation of primary and higher order structures
6	Ι	Evolution of protein structure
7	1	Evolution of protein structure
8		Structure-function relationships in model proteins-Ribonuclease A
9		Structure-function relationships in Myoglobin, Hemoglobin,
10		Structure-function relationship in Chymotrypsin
11		Tools to characterize expressed proteins
12		Tools to characterize expressed proteins
13		Enzyme catalysis-general principles of catalysis
14		Enzyme catalysis-general principles of catalysis
15		Quantitation of enzyme activity and efficiency
16		Enzyme characterization and Michaelis-Menten kinetics
17		Enzyme characterization and Michaelis-Menten kinetics
18		Relevance of enzymes in metabolic regulation, activation, inhibition and covalent
10	II	modification
19		Relevance of enzymes in metabolic regulation, activation, inhibition and covalent
17		modification
20		Relevance of enzymes in metabolic regulation, activation, inhibition and covalent
20		modification
21		Single substrate enzymes
22		Single substrate enzymes
23		Sugars-mono, di, and polysaccharides
24		Sugars-mono, di, and polysaccharides
25		Functions of carbohydrates-Cellular structure, energy storage, signalling,
26		Functions of carbohydrates-Cellular structure, energy storage, signalling,
27		Glycosylation of other biomolecules-glycoproteins and glycolipids
28	III	Glycosylation of other biomolecules-glycoproteins and glycolipids
29		Lipids-structure and properties of important members of storage and membrane lipids
30		Lipids-structure and properties of important members of storage and membrane lipids
31		Lipid organization, Lipoproteins
32		Biomembrane organization-sidedness and function
33		Membrane-bound proteins-structure, properties and functions
34		Membrane-bound proteins-structure, properties and functions
35		Phase-transitions in lipids, polysaccharides
36	IV	Molecular shapes and conformation
37		Comparison between different membrane models
38		Diffusion, Permeability, Carrier transport, ion transport
39		Active and Passive transport, ion pumps, water transport
40		Use of liposomes for membrane models and drug delivery systems
41		Bioenergetics-basic principles, Concept of equilibria and free energy
42		Coupled processes, Glycolytic pathway, Kreb's cycle
43		Oxidative phosphorylation, Photosynthesis
44		Photosynthesis, Elucidation of metabolic pathways
45	v	Logic and integration of central metabolism
46	v	Entry/exit of various biomolecules from central pathways
47		Entry/exit of various biomolecules from central pathways
48		Principles of metabolic regulation
49		Regulatory steps, Signals

Mal	haraja Ra	njit Singh College of Professional Sciences, Indore
		Department of Biotechnology
	Lesson	n Plan - M. Sc. I Biotechnology (July 2020 -Dec 2020)
	Sub	pject - Cell and Developmental Biotechnology
		r - Dr. Monica Jain and Ms. Sakina Indorewala
Day/Lecture	Unit	Topic
	emt	Cell Theory & Methods of Study : Structure of Prokaryotic and Eukaryotic
1		cells
2		Microscope and its modifications
3		Light, Phase contrast
4		Interference, Fluoroscence
5		Confocal, Electron (TEM and SEM)
6		Confocal, Electron (TEM and SEM)
7		Electron tunneling and Atomic Force Microscopy
		Membrane Structure and Function : Structural models; Composition and
8		dynamics;
9	Ι	Membrane Structure and Function : Structural models; Composition and
		dynamics;
10		Transport of ions and macromolecules; Pumps, carriers and channels; Endo- and Exocytosis;
		Transport of ions and macromolecules; Pumps, carriers and channels; Endo-
11		and Exocytosis;
12		Membrane carbohydrates and their significance in cellular recognition
13		Membrane carbohydrates and their significance in cellular recognition
14		Cellular junctions and adhesions; Structure and functional significance of plasmodesmata
15		Cellular responses to environmental signals in plants and animals
16		Organelles : Nucleus
17		Structure and function of nuclear envelope
18		Lamina and nucleolus
19		Macromolecular trafficking
20		Macromolecular trafficking
21		Chromatin organization and packaging
22		Chromatin organization and packaging
23		Cell cycle and control mechanisms
24		Cell cycle and control mechanisms
25	п	Mitochondria - structure
26		Organization of respiratory chain complexes, ATP synthase
27		Organization of respiratory chain complexes, ATP synthase
28		Structure-function relationship; Mitochondrial DNA and male sterility
29		Structure-function relationship; Mitochondrial DNA and male sterility
30		Origin and evolution
31		Chloroplast– Structure function relationship
32		Chloroplast DNA and its significance
33		Chloroplast biogenesis; Origin and evolution
34		Sub cellular fractionation and criteria of functional integrity
35 36		Endo-membrane System and Cellular Motility Structure and function of microbodies
36		
-		Golgi apparatus Golgi apparatus
38 39		Golgi apparatus Lysosomes
40		Endoplasmic Reticulum
40		Endoplasmic Reticulum Endoplasmic Reticulum
41 42		Organization and role of microtubules and microfilaments
42	Ш	Organization and role of microtubules and microfilaments
44		Cell shape and motility; Actinbinding proteins and their significance
45		Cell shape and motility; Actinbinding proteins and their significance
46		Muscle organization and function
47		Muscle organization and function
48		Molecular motors
49		Molecular motors
50		Intermediate filaments
51		Extracellular matrix in plants and animals

50		Callular Maximum to and Dattern Farmer's
52		Cellular Movements and Pattern Formation
53		Cellular Movements and Pattern Formation
54		Laying of body axis planes
55		Laying of body axis planes
56		Differentiation of germ layers
57		Differentiation of germ layers
58		Cellular polarity
59		Model plants like Fucus and Volvox
60		Model plants like Fucus and Volvox
61	IV	Maternal gene effects
62		Maternal gene effects
63		Zygotic gene effects
64		Zygotic gene effects
65		Homeotic gene effects in Drosophila
66		Homeotic gene effects in Drosophila
67		Embryogenesis and early pattern formation in plants
68		Embryogenesis and early pattern formation in plants
69		Cell lineages and developmental control genes in Caenorhabditis
70		Cell lineages and developmental control genes in Caenorhabditis
71		Differentiation of Specialized Cells
72		Differentiation of Specialized Cells
73		Stem cell differentiation; Blood cell formation
74		Stem cell differentiation; Blood cell formation
75		Fibroblasts and their differentiation
76		Fibroblasts and their differentiation
77		Differentiation of cancerous cells and role of protooncogenes
78		Differentiation of cancerous cells and role of protooncogenes
79		Phase changes in Salmonella
80		Mating cell types in yeast
81		Surface antigen changes in Trypanosomes
82		Surface antigen changes in Trypanosomes
83		Heterocyst differentiation in Anabaena
84		Heterocyst differentiation in Anabaena
85		Sex determination in Drosophila.
86	v	Sex determination in Drosophila.
87		Plant Meristem Organization and Differentiation
88		Plant Meristem Organization and Differentiation
89		Organization of Shoot Apical Meristem(SAM)
90		Organization of Shoot Apical Meristem(SAM)
91		Organization of Root Apical Meristem(RAM)
92		Organization of Root Apical Meristem(RAM)
93		Pollen germination and pollen tube guidance
94		Pollen germination and pollen tube guidance
94		Phoem differentiation
95		Self-incompatibility and its genetic control
90		
97		Self-incompatibility and its genetic control
		Embryo and endosperm development
99		Embryo and endosperm development
100		Heterosis and apomixes
101		Heterosis and apomixes

Department of Biosciences Lesson Plan - M. Sc. I Biotechnology (July 2020 -Dec 2020) Subject - Microbiology	
Subject - Microbiology	
Teacher - Dr. Sheetal Bhasin, Dr. Mukesh Patidar	
Day/Lecture Unit Topic	
1 Classification of microorganisms- Classical methods	
2 Classification of microorganisms- Classical methods	
3 Classification of microorganisms- Modern methods	
4 Classification of microorganisms- Modern methods 5 Classification of microorganisms- Modern methods	
6 Unit 1 Techniques for determining microbial taxonomy and phyloge	m 1/
7 Bergey's Manual of Determinative Bacteriology	ily
8 Bergey's Manual of Determinative Bacteriology	
9 Ultrastructure of Archaea	
10 Ultrastructure of Eubacteria	
11 Ultrastructure of Eukaryote (Yeast)	
12 Microbial nutrition	
13 Nutritional types of bacteria	
14 Media and its types	
15 Media and its types	
16 Media and its types	
17 Theory and practice of sterilization	
17 Unit 2 18 Cultivation of aerobic bacteria	
19 Cultivation of aerobic and anaerobic bacteria	
20 Pure culture techniques and enrichment culture	
21 Maintainance of cultures	
22 Maintainance of cultures	
23 Culture collection centers	
24 Microbial growth	
25 Bacterial growth curve	
26 Growth Kinetics, Generation time, Growth Rate	
27 Batch, Fed-batch and Continous culture	
28 Unit 3 Synchronous and Diauxic growth	
29 Measurements of microbial growth	
30 Measurements of microbial growth	
31 Factors affecting microbial growth	
32 Factors affecting microbial growth	
33 Factors affecting microbial growth	
34 Host-pathogen interactions	
35 Host-pathogen interactions	
36 Mechanism of pathogenesis	
37 Mechanism of pathogenesis 38 Mechanism of pathogenesis	
30 Mechanism of pathogenesis	
40 Unit 4 Pathogenecity islands and their role of virulence	
40 Pathogenecity islands and their role of virulence 41 Pathogenecity islands and their role of virulence	
42 Toxins and their types	
43 Toxins and their types	
44 Toxins and their types	
45 Toxins- structure and mode of action	
46 Viruses	
47 Classification of bacterial, plant and animal viruses	
48 Classification of bacterial, plant and animal viruses	
49 Classification of bacterial, plant and animal viruses	
50 Classification of bacterial, plant and animal viruses	
51 Unit 5 Statellite virus	
52 Viroids, Virusoids	
53 Classification and general features of fungi	
54 Classification and general features of fungi	
55 Life cycle of <i>Penicillium</i>	
56 Life cycle of <i>Saccharomyces</i>	

	Mahai	raja Ranjit Singh College of Professional Sciences, Indore
		Department of Biosciences
		Lesson Plan - M. Sc. I Biotechnology (July 2020 - Dec 2020)
		Paper-IV-Biostatistics and Bioinformatics
		Teacher - Ms. Manisha
Day/Lecture	Unit	Topic
1		Fundamental concepts in Applied probability
2		Probability and analysis of one and two way samples
3		Discrete probability models
4		Continuous probability models
5		Continuous probability models
6		Expectation and variance
7		Expectation and variance, Central Limit Theorem
8		Inference, hypothesis
9		Critical region and Error probabilities
10	Ι	Tests for proportions
11		Tests for proportions
12		Equality of proportions
13		Equality of proportions
14		Equality of means of normal population (variance known)
15		Equality of means of normal populations (variance known)
16		Chi-square test for independence
17		P-value of the statistic, Confidence-limits
18		Introduction to one- and two-way analysis of variance
18		Data transformation
20		Elements of programming languages- C and PERL
20		Elements of programming languages- C and PERL
22		Database concept, Database management system
23		Database concept, Database management system
23		Database concept, Database management system Database browsing and data retrieval, Sequence database and genome database
24	Π	
25		Data structures and databases, GenBank, EMBL, DDBJ databases Swissprot, PIR, MIPS databases
		Hovergen, TAIR, PlasmoDB, ECDC databases
27		
28		Searching sequence databases using FASTA and BLAST algorithms
29		Searching sequence databases using FASTA and BLAST algorithms
30		Cluster analysis
31		Phylogenetic clustering by simple matching coefficients
32		Sequence comparison, Sequence pattern
33		Regular expression based patterns
34	III	Theory of Profiles and their use in sequence analysis
35		Markov models, concept of HMMS
36		Baum-Welch algorithm
37		Use of Profile HMM for protein family classification
38		Pattern recognition methods
39		Pattern recognition methods
40		Goals of Microarray experiments
41		Normalization of Microarray data
42		Detecting differential gene-expression, Principal component analysis
43	TX 7	Clustering of microarray data
44	IV	Structure determination by X-ray crystallography
45		Structure determination by X-ray crystallography
46		Structure determination by NMR spectroscopy
47		Structure determination by NMR spectroscopy
48		Protein Data Bank (PDB) and Nucleic acid Data Bank (NDB),
49		Methods for modelling: Homology modelling
50		Homology modelling,
51		Threading, Protein structure prediction
52		Protein structure prediction
53	v	Structure-structure comparison of proteins
54	•	Force-fields
55		Molecular energy minimization
56		Molecular energy minimization
57		Mone carlo and Molecular dynamics simulations

Department of Biosciences

Lesson Plan - M. Sc. I Biotechnology (July 2020 - Dec 2020)

Subject - Practical 1 Paper I-Biochemistry Paper II-Cell Biology

Teacher - Dr. Mukesh / Prof. Sakina Indorewala

Day/Lecture	Торіс
1	To prepare an Acetic-NaAcetate Buffer system
2	Standard graph of BSA using UV-Vis Spectrophotometer
3	Validating the Beer- Lambert's Law.
4	Separation of aliphatic, aromatic and polar amino acids by TLC
5	Nelson Somogyii's and DNS method.
6	Determination of enzyme activity
7	Studying the effect of temperature, pH on enzyme activity
8	Studing the effect of enzyme concentration & substrate concentration on
0	enzyme activity.
9	Isolation of biomolecules from natural sources.
10	Microscopy: Bright field, phase contrast and fluorescence microscopy
11	Microtomy.
12	Subcellular fractionation and marker enzymes
13	Histochemical techniques.
14	Mitosis and Meiosis.

Department of Biosciences

Lesson Plan - M. Sc. I Biotechnology (July 2020 -Dec 2020)

Subject - Practical 2

Paper I-Microbiology

Paper II-Biostate and Bioinformatics

Teacher - Dr. Sheetal Bhasin / Dr. Mukesh Patidar

Day/Lecture	Торіс
1	Sterilization, disinfection, safety in microbiological laboratory
2	Preparation of media for growth of various microorganisms
3	Identification and culturing of various microorganisms.
4	Staining and enumeration of microorganisms
5	Growth curve, measure of bacterial population by turbidometry
6	studying the effect of temperature, pH, carbon and nitrogen.
7	Isolation and identification of fungus
8	Isolation of bacteriophage.
9	Introduction to MSEXCEL-Use of worksheet to enter data
10	Use of in-built statistical functions for computations of Mean, S.D.,
11	Correlation, regression coefficients
12	Use of bar diagram, histogram, scatter plots, etc.
13	Graphical tools in EXCEL for presentation of data.
14	Introduction to SYSTAT package.
15	Searching PubMed
16	Introduction to NCBI, NCBI data bases
17	BLAST BLASTn, BLASTp, PSI-BLAST,
18	Sequence manipulation Suite, Multiple sequence alignment,
19	Primer designing, Phylogenetic Analysis.
20	Protein Modeling, Protein structure Analysis, Docking, Ligplot interactions
21	Docking, Ligplot interactions

Maha	raja Ra	njit Singh College of Professional Sciences, Indore	
	Ū	Department of Biosciences	
	Less	on Plan - M. Sc. I Biotechnology (July 2020 -Dec 2020)	
	1000	Subject - Enzyme Technology	
		Teacher - Dr. Sadhana Nighojkar	
Day/Lecture	Unit	Торіс	
1		Introduction to enzymology	
2		Historical developments in enzymology	
3		Enzyme classification	
4	Ι	IUBMB enzyme classification	
5		Techniques of enzyme isolation	
6		Principle and techniques of enzyme assay	
7		Factors affecting enzyme activity	
8		Factors affecting enzyme activity	
9		Intracellular localization of enzymes	
10		Mechanism of Enzyme Action	
11		Investigation of active site	
12		Enzyme activators	
13	II	Co-enzymes and co-factors in enzyme catalysis	
14		Techniques of separation	
15		Purification of enzyme	
16		Purification of enzyme	
17		Test of homogeneity	
18		Enzyme Kinetics	
19		Bioenergetics and Catalysis	
20		Equilibrium kinetics	
21		Steady state kinetics	
22	III	Significance of Km, Vmax & Kcat.	
23		Significance of Km, Vmax & Kcat.	
24		Multisubstrate reaction kinetics : General rate equation	
25		Ordered, random order equation	
26		Ping-pong mechanisms	
27		Enzyme inhibition and its kinetics	
28		Reversible and irreversible inhibition	
29		Competitive, non-competitive and uncompetitive inhibition	
30		Mixed & partial inhibition	
31	IV	Substrate inhibition	
32		Effect of temperature on reaction rate	
33		Enzyme stability	
34		Arrhenius equation	
35		Activation energy	
36		Allosteric enzymes and sigmoidal kinetics	
37		Co-operativity	
38		MWC & KNF models	
38		Enzyme memory and pneumonical enzymes.	
40	v		
40	v	Isoenzymes	
		Multienzyme complex & their physiological significance	
42		Multifunctional enzymes & their physiological significance	
43		Biosensors ; Enzymes as analytical reagents	
44		Ribozymes and catalytic antibodies	

Mahara	aja Ranj	jit Singh College of Professional Sciences, Indore
	_	Department of Biosciences
	Lesson	Plan - M. Sc. I Biotechnology (July 2020 -Dec 2020)
		Subject - Food Biotechnology
		Teacher - Fatema Matkawala
Day/Lecture	Unit	Торіс
1		Biotechnology in relation to food industry
2		Nutritive value of food
3		Nutritive value of food
4	Unit 1	Types of microorganisms associated with food
5		Types of microorganisms associated with food
6		Types of microorganisms associated with food
7		Types of microorganisms associated with food
8		General principles of food preservation
9		Bioprocessing of meat
10		Bioprocessing of meat
11		Bioprocessing of fisheries
12		Bioprocessing of vegetables
13		Bioprocessing of dairy products
14	Unit 2	Bioprocessing of dairy products
15		Enzymes used in food processing
16		Enzymes used in food processing
17		Chemicals used in food processing
18		New Preservation Technologies
19		New Preservation Technologies
20		New Preservation Technologies
21		Microbial spoilage of food
22		Microbial spoilage of food
23		Microbial spoilage of food
24		Microbial spoilage of food
25	Unit 3	Food infenctions - Gastroenteritis
26	Onit 5	Food infenctions - Salmonellosis
27		Food infenctions - Shigellosis
28		Food intoxications- Botulism
29		Staphylococcal intoxication
30		Mycotoxins
31		Fermented dairy products
32		Fermented dairy products
33		Fermented dairy products
34		Non-beverage plant products
35		Non-beverage plant products
36		Beverages
37		Beverages
38	Unit 4	Beverages
39		Beverages
40		Baked products
41		Baked products
42		Single cell proteins
43		Single cell oils
44		Probiotics and Prebiotics
45		Probiotics and Prebiotics
46		Microbiological examination of food
47		Microbiological examination of food
48		Microbiological examination of food
49		Quality assurance
50		Quality standards of food
51	Unit 5	Government regulatory practices and policies
52		Government regulatory practices and policies
53		FDA
55		IDA
54		FDA

Maha	raja Ra	njit Singh College of Professional Sciences, Indore
		Department of Biosciences
	Lesso	on Plan - M. Sc. I Biotechnology (July 2020 -Dec 2020)
		Subject - Enviornmental Biotechnology
		Teacher - Zahabiya Saifee
Day/Lecture	Unit	Торіс
1		Environment: Basic concept
2		Environment: Issues
3		Pollution: Types of pollution
4		Pollution: Types of pollution
5	1	Pollution: Methods for measurement of pollution
6	1	Pollution: Methods for measurement of pollution
7		Pollution: Methods for measurement of pollution
8		Methodology for environment management
9		Methodology for environment management - Problem solving Ap.
10		Limitations of enviornmental management
11		Air pollution - Introduction
12		Air pollution - Control through biotechnology
13		Air pollution - Control through biotechnology
14		Water as scarce natural resources
15		Need for water management
16	2	Measurement of water pollution
17	-	Measurement of water pollution
18		Source of water pollution
19		Waste water treatment: Physical and Chemical
20		Waste water treatment: Biological
21		Microbiology of waste water treatment
22		Microbiology of waste water treatment
23		Aerobic process: Activated sludge
24		Aerobic process: Oxidation ditches and Trickling filter
25		Aerobic process: Towers and Rotating disc
26		Aerobic process: Rotating drums and Oxidation ponds
27	2	Anaerobic digestion and anaerobic filters
28	3	Up flow anaerobic sludge blanket reactor
29		Treatment schemes for waste water of dairy
30		Treatment schemes for waste water of distillery
31		Treatment schemes for waste water of Tannery Treatment schemes for waste water of Sugar
32 33		Treatment schemes for waste water of Antibiotic
33		Microbiological degradation of xenobiotic in Environment
35		Microbiological degradation of xenobiotic in Environment
35		Microbiological degradation of xenobiotic in Environment
30		Ecological consideration
37		Decay behavior
38	4	Degradative plasmid
40		Hydrocarbons
40		Oil pollution
41		Surfactants
42		Pesticides
44		Bioremediation Introduction
44		Bioremediation of contaminated soils
46		Bioremediation of waste land
40		Biopesticides in integrated pest management
48		Biopesticides in integrated pest management
48		Soil waste source and management - Composting
50	5	Soil waste source and management - Vormiculture
51	5	Soil waste source and management - Volmiculture
52		Global environmental problems
53		Ozone depletion
54		UV-B and Green house effect
55		Acid rain and their impact
56		Biotechnological approaches for management
50		Biotecniological approaches for management

Maharaja Ranjit Singh College of Professional Sciences, Indore				
	T	Department of Biotechnology son Plan - M. Sc. I Biotechnology (July 2020 -Dec 2020)		
	Less	Subject - Plant Biotechnology		
		Teacher - Dr. Monica Jain		
Day/Lecture	Unit	Торіс		
1		Introduction to cell and Tissue Culture		
2		Tissue culture media (composition and preparation)		
3 4		Tissue culture as a technique to produce novel plants and hybrids Tissue culture as a technique to produce novel plants and hybrids		
5		Initiation and maintenance of callus and suspension culture; single cell clones		
6		Initiation and maintenance of callus and suspension culture; single cell clones		
7		Organogenesis		
8		somatic embryogenesis Transfer and establishment of whole plants in soil.		
10	Ţ	Shoot-tip culture: rapid clonal propagation and production of virus-free plants.		
11	Ι	Shoot-tip culture: rapid clonal propagation and production of virus-free plants.		
12		Embryo culture and embryo rescue.		
13		Protoplast isolation, culture and fusion; selection of hybrid cells		
14		Protoplast isolation, culture and fusion; selection of hybrid cells		
15		Regeneration of hybrid plants; symmetric and asymmetric hybrids, cybrids.		
16		Regeneration of hybrid plants; symmetric and asymmetric hybrids, cybrids. Anther, pollen and ovary culture for production of haploid plants and		
17		homozygous lines.		
18		Anther, pollen and ovary culture for production of haploid plants and homozygous lines.		
19		Plant transformation Technology: basis of tumor formation, hairy root		
20		Features of Ti and Ri plasmids		
21		Mechanisms of DNA transfer, role of virulence genes		
22 23		Use of Ti and Ri as vectors, binary vectors, use of 35S and other promoters, Genetic markers		
23		Use of reporter genes with introns, use of scaffold attachment regions		
25		Methods of nuclear transformation		
26	II	Viral vectors and their application, multiple gene transfers		
27		Vectors-less or direct DNA transfer, particle bombardment, electroporation,		
	-	microinjection, transformation of monocots. Vectors-less or direct DNA transfer, particle bombardment, electroporation,		
28		microinjection, transformation of monocots.		
29		Transgene stability and gene silencing.		
30		Chloroplast transformation: Vectors, advantages.		
51		Chloroplast transformation: Vectors, advantages. Application of plant Transformation for productivity and performance		
32

Department of Biosciences

Lesson Plan - M. Sc. I Biotechnology (July 2020 - Dec 2020)

Subject - Practical 1

Paper

I-Enzyme technology Paper II-Food Biotechnology

raper n-rood Biotechnology			
	Teacher - Dr. Sheetal Bhasin Dr. Fatema Matkawla		
Day/Lecture	Торіс		
1	Enzyme Production		
2	Determination of Enzyme activity		
3	Effect of pH on enzyme activity		
4	Effect of temperature on enzyme activity		
5	Effect of substrate concentration on enzyme activity		
6	Determination of Km / Vmax		
7	Effect of heavy metals on enzyme activity		
8	Activator/ inhibitors study		
9	Qualitative / Quantitative analysis of food sample		
10	MPN analysis of food sample		
11	MPN analysis of milk sample		
12	MBRT		
13	Resazurin test of milk		
14	Standard plate count of food sample		
15	Standard plate count of milk		
16	Preparation of bread		

Mahara	ja Ranjit Singh College of Professional Sciences, Indore		
	Department of Biosciences		
Lesson Plan - M. Sc. I Biotechnology (July 2020 -Dec 2020)			
Subject - Practical 1 Paper			
	Environmental Biotechnology		
	Paper II-Plant Biotechnology		
	Teacher - Dr. Sheetal Bhasin/ Dr. Monica jain		
Day/Lecture	Topic		
1	Preparation of media		
2	Surface sterilization.		
3	Organ Culture.		
4	Callus propagation, organogenesis, transfer of plants to Soil.		
5	Protoplast isolation and culture		
6	Anther culture		
7	Production of Haploids		
8	Cytological examination of regenerated plants.		
9	Agro bacterium culture, selection of transformants, reporter gene (GUS) assays.		
10	Preparation of tissue culture medium and membrane filtration		
11	Area monitoring		
12	Analysis of air		
13	Qualitative and quantitative analysis of sewage		
14	Qualitative and quantitative analysis of water		
15	Qualitative and quantitative analysis of soil		
16	MPN analysis of water/ sewage sample		
17	Isolation of rhizobium fromroot nodules		
18	Isolation of azatobator from soil		

Maharaja Ranjit Singh College of Professional Sciences, Indore			
Department of Biosciences			
Lesson Plan - M. Sc. Biotechnology Sem II (Jan 2019 - June 2019)			
Subject - Molecular Biology			
		Teacher - Zahabiya Saifee	
Day/Lecture	Unit	Торіс	
1		Organization of bacterial genome	
2		Structure of eukaryotic chromosome	
3		Role of nuclear matrix in chromosome organization	
4		Matrix binding proteins	
5		Hetrochromatin & euchromatin, satellite DNA	
6	Ι	DNA reassociation kinetics	
7		Repetative & unique sequnces	
8		DNA melting & buoyant density	
9		Nucleosome phasing	
10		DNAse I hypersensitive region	
11		DNA methylation & methylation	
12		DNA structure & types	
13		Measurement of spectrophotometric properties	
14		CD, AFM & electron microscope analysis of DNA	
15		Prokaryotic replication	
16		Eukaryotic replication	
17	II	Enzymes & proteins involved	
18		Repair systems- photoreactivation, excision repair	
19		Repair pathways- mis match repair, SOS repair	
20		Recombination- homologous & non homologous	
21		Site specific recombination & chi sequences	
22		FLP/FRT & CRE/LOX recombination	
23		Gene targeting & disruption	
24		Prokaryotic transcription	
25		Transcription unit; promoters & operators	
26		Intiation, elongation & termination	
27 28		Transcriptional regulation- positive & negative Lac operon	
28		Trp operon	
30	III	Ara & His operon	
30		Gal operon	
32		Eukaryotic transcription	
33		RNA polymerase & transcription factors	
34		Activators & repressors	
35		Transcriptional & post transcriptional gene silencing	
36		Processing of rRNA, tRNA, mRNA	
37		Capping, Polyadenylation & splicing	
38		RNA editing	
39		Nuclear export of mRNA & stabillity	
40		Catalytic RNA	
41	IV	Features of genetic code	
42		Translation machinery & mehcanism of translation	
43		Co & post translational modifications	
44		Genetic code in mitochondria	
45		Transport of proteins & chaperon concept	
46		Protein stability, turnover & degradation	
47		Mutations, isolation of mutants	
48		Useful phenotype- Auxotrophic, conditional	
49		Useful phenotype- lethal, resistant	
50	v	Reversion & supression	
51	v	Physical mutagens	
52		Chemical mutagens	
53		Mechanism of mutagenesis	
54		Ames test	

	Maharaja	Ranjit Singh College of Professional Sciences, Indore
		Department of Biosciences
		an - M. Sc. Biotechnology Sem II (Jan 2019 - June 2019)
	1	Paper-II: Bacterial Genetics and Genetic Engineering Teacher - Shaishav Sharma
ay/Lectu	Unit	Topic
1	Cint	Gene transfer in bacteria: History, Conjugation-F, F', Hfr
2		F transfer, Hfr-mediated chromosome transfer
3		Transformation-natural and artificial transformation
4		Transformation-natural and artificial transformation
5		Transduction-Generalized Transduction
6 7	Ι	Transduction-Specialized transduction Merodiploid generation
8	1	Gene Mapping
9		Transposable genetic elements, Insertion sequences
10		Composite and complex transposons
11		Replicative and non-replicative transposition
12		Genetic analysis using transposons
13		Genetic analysis using transposons
14		Bacteriophage-structure, Assay, Lambda phage-Genetic map
15 16		Lambda phage-Lysogenic and lytic cycles Lambda phage-Gene regulation
10		Filamentous phages such as M13, Plasmids-natural plasmids
		Plasmids-properties and phenotypes, Plasmid biology-copy number and its
18	П	control
19 20	11	Plasmid incompatibility, plasmid survival strategies Antibiotic resistance markers on plasmids-mechanism of action and
20		resistance Genetic anaysis using phage and plasmid
		Restriction-modification (R-M) systems: History, Types of R-M systems
22		and their characteristics
23 24		Methylation-dependent restriction systems and their applications Basic concepts of genetic engineering: Restriction enzymes
24		T4 DNA Polymerase, Klenow enzyme
26		DNA Ligase, Polynucleotide kinase, Alkaline phosphatase
27		Cohesive and Blunt-end ligation, Linkers, Adapters, Homopolymeric tailing
28		Labelling of DNA: Nick translation, Random priming, Radioactive and
	III	non-radioactive probes
29		Hybridization techniques: Northern, Southern
30		Colony hybridization, Fluorescence in situ hybridization Chromatin immunoprecipitation, DNA-Protein interactions-
31		Electrophoretic mobility shift assay
32		DNA-Protein interactions-Electrophoretic mobility shift assay
33		DNaseI footprinting, Methyl interference assay
34		Cloning vectors: Plasmids-pUC19
35		Bacteriophage vectors-Lambda vectors, Insertion and replacement vectors
36		M13mp vectors, Phagemids, Bluescript vectors, EMBL
37		Cosmids, Bacterial artificial chromosomes (BACs), Yeast Artificial
		chromosomes (YACs)
38	IV	Animal-virus derived vectors-SC-40, Vaccinia/Bacculo and retroviral vectors
39	1 V	Expression-vectors-pMAL, GST, pET-based vectors
40		Protein purification-His-tag, GST-tag, MBP-tag etc., Intein-based vectors
41		Inclusion-bodies, Methodologies to reduce inclusion-bodies
41 42		Bacculovirus and Pichia vectors
43		Plant-based vectors-Ti and Ri plasmids as vectors
44		Yeast vectors, Shuttle vectors
45		Cloning methodologies: Insertion of foreign DNA into host cells, Transformation
46		Construction of libraries, Isolation of mRNA and total RNA
47		cDNA and genomic libraries
48	v	cDNA and genomic libraries, cDNA and genomic cloning
49	v	Expression cloning, Jumping and hopping libraries
50		Southwestern and Farwestern cloning
51		Protein-protein interaction cloning and Yeast two hybrid system
52 53		Phage display, Principles in maximizing gene expression
33		Principles in maximizing gene expression

Maharaja Ranjit Singh College of Professional Sciences, Indore			
-	Department of Biosciences		
Lesson Plan - M. Sc. Biotechnology Sem II (Jan 2019 - June 2019)			
Subject - Immunology			
		Teacher - Poonam Sharma	
Day/Lecture	Unit	Торіс	
1		Components of innate & aquired immunity	
2		Phagocytosis	
3		Complement system	
4		Inflammatory responses	
5		Haematopoesis	
6	Ι	Cells of immune system	
7		Organs- primary lymphoid organs	
8		Organs- secondary lymphoid organs	
9		Lymphatic system	
10		Lymphocyte circulation & homing	
		MALT & CALT	
11		Structure & properties of antigens	
12		Haptens & adjuvants, hapten carrier system	
13		Toxins & toxoids	
14		Immunoglobulins structure	
15		Types properties of Ig	
16		Multigene organization of immunoglobulin	
17	П	Immunoglobulin superfamily	
18		B & T cell receptors	
19		B cell maturation, maturation & differentiation	
20		Antibody diversity	
21		T cell maturation, activation & differentiation	
22		Cell mediated immune response	
23		Complement system	
25		Complement pathways	
26		Antigen antibody interaction	
27		Affinity, cross reactivity, specifity	
28		Agglutination	
29	III	Precipitation	
30		Complement mediated immune response	
31		Immunofluorescence, ELISA	
32		Western blotting, ELISPOT assay RIA, immunoelectron microscopy	
33 34			
35		Active immunization Passive immunization	
36		Live, killed & attenuated vaccines	
30		Sub unit vaccines	
37	IV	Properties of adjuvants	
39	1 V	Plant based vaccines	
40		Reverse vaccinology	
40		Peptide vaccines	
42		Conjugate vaccines	
43		MHC & HLA typing	
44		Hypersensitivity Type I	
45		Hypersensitivity Type II	
46		Hypersensitivity Type III	
47		Hypersensitivity Type IV	
48		Autoimmunity	
49		Autoimmune diseases	
50	V	Tranplantation immunology	
51		Graft rejection	
52		Clinical transplantation	
53		Immunosuppresive therapy	
54		Tumor immunology & antigens	
55		Tumor antigens, immune response to tumor	
56		Tumor evasion of immune system	
57		Immunodeficiencies	
		•	

Maha	Maharaja Ranjit Singh College of Professional Sciences, Indore				
Department of Biosciences					
Lesson Plan - M. Sc. Biotechnology Sem II (Jan 2019 - June 2019)					
Subject - Analytical Techniques					
Destation		eacher - Dr. Sadhana Nighojkar			
Day/Lecture	Unit	Topic Buffers			
2		Methods of cell disintegration			
3		Methods of cell disintegration			
4		Enzyme assays and controls			
5		Enzyme assays and controls			
6 7	Unit 1	Detergents and membrane proteins Dialysis, Ultrafiltration and other membrane techniques			
8	Unit I	UV, Visible Spectroscopy			
9		Raman Spectroscopy			
10		Theory and application of Circular Dichroism			
11		Fluorescence, MS			
12		NMR, PMR			
13 14		ESR and Plasma Emission spectroscopy			
14		TLC and Paper chromatography Gel permeation chromatography			
16		Ion exchange chromatography			
13		Hydrophobic, Reverse-phase chromatography			
18		Affinity chromatography; HPLC and FPLC			
19	Unit 2	Criteria of protein purity			
20		Polyacrylamide and Agarose gel electrophoresis			
21 22		Capillary electrophoresis 2D Electrophoresis			
22		Disc gel electrophoresis			
24		Gradient electrophoresis; Pulsed field gel electrophoresis			
25		Basic principles & theory of RCF and Sedimentation coefficient			
26		Microcentrifuge, High speed & Ultracentrifuges			
27		Preparative centrifugation			
28 29		Differential centrifugation Density gradient centrifugation			
30	Unit 3	Applications (Isolation of cell components)			
31		Analytical centrifugation			
32		Determination of molecular weight by sedimentation velocity &			
		sedimentation equilibrium methods			
33		Determination of molecular weight by sedimentation velocity & sedimentation equilibrium methods			
34		Radioactive & stable isotopes			
35		Radioactive & stable isotopes			
36		Pattern and rate of radioactive decay			
37		Units of radioactivity			
<u>38</u> 39		Geiger-Muller counter Solid & Liquid scintillation counters			
40		Solid & Liquid scintillation counters			
40		Brief idea of radiation dosimetry			
42	Unit 4	Cerenkov radiation			
43		Autoradiography			
44		Measurement of stable isotopes- Falling drop method			
45		Applications of isotopes in biochemistry			
46 47		Radiotracer techniques Distribution studies			
47		Isotope dilution technique			
49		Metabolic studies			
50		Clinical application; Radioimmunoassay			
51		Protein crystallization- Theory and methods			
52		Protein crystallization- Theory and methods			
53 54		API-electrospray and MADI-TOF API-electrospray and MADI-TOF			
55		Mass spectrometry			
56	Unit 5	Enzyme and cell immobilization techniques			
57		Enzyme and cell immobilization techniques			
58		Enzyme and cell immobilization techniques			
59 60		DNA Synthesis			
00		Peptide Synthesis			

Department of Biosciences

Lesson Plan - M. Sc. Biotechnology Sem II (Jan 2019 - June 2019)

Subject - Practical 1

Paper I

Molecular Biotech Paper II-Bacterial genetics and Genetic Engineering

Teacher - Prof.Zahabiya Saifee/ Dr. Mukesh

Day/Lecture	Торіс
1	Isolation of bacterial genomic DNA.
2	Plasmid DNA isolation and DNA quantitation: Plasmid minipreps
3	Restriction digestion
4	Preparation of competent cells.
5	Agarose gel electrophoresis
6	Restriction Enzyme digestion of DNA
7	Purification of DNA from an agarose gel
8	DNA Ligation
9	Transformation of E.coli with standard plasmids, Calculation of transformation efficiency
10	Cloning of genomic DNA in standard plasmid vectors
11	Confirmation of the insert, Miniprep of recombinant plasmid DNA Restriction mapping
12	Transformation of yeast Saccharomyces cerevisiae

Subject - Bioprocess Technology			
Teacher - Dr. Sheetal Bhasin			
Day/Lecture	Unit	Торіс	
1		Isolation and screening microorganisms	
2		Isolation and screening of microorganisms	
3		Primary screening methods	
4 5		Secondary screening methods Secondary screening methods	
6		Secondary screening methods	
7	Unit 1	Maintainance of microorganisms	
8		Maintainance of microorganisms	
9		Microbial growth kinetics	
10		Microbial growth kinetics	
11 12		Microbial death kinetics Strain improvement	
13		Strain improvement	
14		Media formulation	
15		Media formulation	
16		Industrial sterilization	
17		Industrial sterilization	
18 19		Aeration and Agitation Scale-up	
20		Scale-up	
21	Unit 2	Scale-down: Bioseperation	
22		Scale-down: Cell disruption methods	
23		Scale-down: Extraction	
24		Scale-down: Purification by chromatography	
25 26		Scale-down: Purification by chromatography Scale-down: Drying	
20		Scale-down: Formulation	
28		Treatment of effluent and its disposal	
29		Basic fermentor design	
30		Batch, Fed-batch, Continuous process	
31 32		Types of fermenters Types of fermenters	
33		Types of fermenters	
34	Unit 3	Conventional fermentation v/s Biotransformation	
35	Unit 3	Conventional fermentation v/s Biotransformation	
36		Solid state fermentation	
37		Surface fermentation	
<u>38</u> 39		Submerged fermentation Measurements and control of bioprocess parameters	
40		Measurements and control of bioprocess parameters	
41		Industrial production of Ethanol	
42		Industrial production of Lactic acid	
43		Industrial production of Glutamic acid	
44	Unit 4	Industrial production of Lysine	
45 46		Industrial production of Vitamin B12 Industrial production of Penicillin	
40		Industrial production of Penicillin	
48		Industrial production of Streptomycin	
49		Protease- production and purification	
50		Amylase- production and purification	
51		Enzyme immobilisation	
52 53		Enzyme immobilisation Whole cell immobilisation	
54	Unit 5	Applications of immobilization	
55		Bioinsecticides and biofertilisers	
56		Bioinsecticides and biofertilisers	
57		Single cell proteins	
58		MEOR	

Maharaja Ranjit Singh College of Professional Sciences, Indore				
Department of Biosciences				
Lesson Plan - M. Sc. IV Biotechnology (Jan 2019 - Jun 2019)				
Paper-II: Genomics, Proteomics, IPR and Biosafety				
		Teacher - Dr. Mukesh /Nikita Chordia		
Day/Lecture	Unit	Торіс		
1		DNA sequencing principles and sequencing methods		
2		Chemical sequencing of DNA		
3		Enzymatic DNA sequencing		
4		Enzymatic DNA sequencing		
5	Ι	Automated DNA sequencing, RNA sequencing		
6	1	Chemical synthesis of oligonucleotides		
7		Chemical synthesis of oligonucleotides		
8		Recognition of coding and non-coding sequences, Gene annotation		
9		Recognition of coding and non-coding sequences, Gene annotation		
10		ESTs and SNPs		
11		Tools for Genome analysis: RFLP, RAPD, DNA Fingerprinting		
12		Physical and Genetic mapping		
13		Linkage and Pedigree analysis		
14		Linkage and Pedigree analysis		
15		Primer design		
16		PCR: Its types and application		
17		PCR: Its types and application, Site-specific mutagenesis		
18		Gene silencing techniques: Introduction to siRNA technology		
19	II	Micro RNA, Construction of siRNA vectors		
20		Principles and applications of gene silencing		
21		Gene knockouts and Gene Therapy, Creation of knockout mice		
22		Disease models, Somatic and germ-line therapy- in-vivo and ex-vivo		
23		Somatic and germ-line therapy- in-vivo and ex-vivo, Suicide gene therapy		
24 25		Gene replacement, Gene targetting Transgenics		
25		cDNA and intragenic arrays		
20		cDNA and intragenic arrays		
28		Proteomics: Protein analysis-Measurement of concentration of proteins		
28		Amino acid composition, N-terminal sequencing		
30		2-D Electrophoresis of proteins		
31		Microscale solution isoelectrofocussing, Peptide fingerprinting		
32		LC-MS/MS for identification of proteins and modified proteins		
33		MALDI-TOF, SAGE		
34	Ш	Functional genomics and proteomics: Analysis of Microarray data		
35		Analysis of Microarray data		
36		Protein and peptide microarray-based technology		
37		PCR-directed protein in situ arrays		
38		PCR-directed protein in situ arrays		
39		Structural proteomics		
40		Structural proteomics		
41		Introduction to intellectual Property: Types of IP: Patents, Trademarks, Copyright and		
41		Related rights		
42		Industrial design		
43	IV	Traditional knowledge, Protection of GMOs		
44	IV.	IP as a factor in R & D, IPs of relevance to Biotechnology and few case studies		
45		Types of patent applications: Ordinary, PCT, Conventional, Divisional and Patent of		
		Addition		
46		Types of patent applications, Patent databases		
47		Biosafety: Introduction, Historical background, Introduction to Biological safety		
		Cabinets		
48		Primary containment for Biohazards, Biosafety levels		
49	V	Biosafety levels of specific microorganisms, Recommended biosafety levels for		
		infectious agents and infected animals		
50		Biosafety guidelines-Govt. of India, Definition of GMOs and LMOs, Roles of		
		Indutrial Biosafety Committee		
51		RCGM, GEAC etc. for GMO applications in food and agriculture		

Maharaja Ranjit Singh College of Professional Sciences, Indore			
Department of Biosciences			
Lesson Plan - M. Sc. IV Biotechnology (Jan 2019 - Jun 2019)			
Subject - Animal Biotechnology			
Derr/Lestrone	Unit	Teacher - Zahabiya Saifee	
Day/Lecture	Umt	Topic Structure and organization of animal cell.	
2		Equipment and materials for animal cell culture technology	
3		Introduction to the balanced salt solutions	
4		simple growth medium	
	Ι	chemical, physical and metabolic functions of different constituents	
5		of culture medium	
6		Role of serum and supplements	
7		Serum free defined media and their application.	
8		Protein free defined media and their application.	
9		Measurement of viability and cytotoxicty	
10		Biology and characterization of the cultured cells	
11		Measuring parameters of growth	
12		Basic techniques of mammalian cell culture in vitro	
13	II	Disaggregation of tissue and primary culture	
14		Maintenance of cell culture	
15		Cell separation	
16		Primary cell cultures.	
17		Primary and established cell line cultures.	
18		Scaling-up of animal cell culture	
19		Cell synchronization	
20	ш	Cell fusion	
21 22	III	Cell cloning Micromoninglation	
22		Micromanipulation. Cell transformation	
23		Somatic cell genetics.	
24		Organotypic & organ cultures	
26		Histotypic cultures	
20		Three dimensional matrices	
28	IV	Tissue engineering	
29		Measurement of cell death	
30		Apoptosis	
31		Transfection of mammalian cells	
32		Application of animal cell culture	
33		Production of biopharmaceuticals	
34	V	Cell culture based vaccines	
35	v	Cell culture based vaccines	
36		Stem cell cultures	
37		Embryonic & adult stem cells	
38		Transgenic animals	
39			

Department of Biosciences

Lesson Plan - M. Sc. IV Biotechnology (Jan 2019 - Jun 2019)

Subject - Practical 1 Paper I-Bioprocess Technology Paper II-Genomics, Proteomics

	Teacher - Dr. Sheetal Bhasin /Dr. Mukesh					
Day/Lecture	Торіс					
1	Isolation and screening of industrially important microorganisms					
2	Determination of thermal death point and thermal death time of					
2	microorganisms.					
3	Production of microbial products in bioreactors					
4	Assay of antibiotics production					
5	Studying the kinetics of enzymatic reaction by microorganisms					
б	Production and purification of various enzymes from microbes.					
7	Comparative studies of Ethanol production using different substrates.					
8	Microbial production and downstream processing of an enzyme, e.g. amylase.					
9	Various immobilization techniques of cells/enzymes, use of alginate for cell					
	immobilization.					
10	PCR amplification gene and analysis by agarose gel electrophoresis					
11	Polymerase Chain reaction, using standard 16srRNA eubacterial primers.					
12	RFLP analysis of the PCR product					
13	Plasmid isolation and confirming recombinant by PCR and RE digestion.					
14	Southern hybridization of <i>B. subtilis</i> genome with probe and non-radioactive					
14	detection					

Department of Biosciences

Lesson Plan - M. Sc. IV Biotechnology (Jan 2019 - Jun 2019) Subject - Practical 2 Animal Biotechnology

Day/Lecture	Торіс
1	Preparation of single cell suspension from spleen
2	Preparation of single cell suspension from thymus
3	Measurement of phagocytic activity
4	Trypsinization of monolayer and sub-culturing
5	Cryopreservation and thawing
6	Measurement of doubling time
7	Role of serum in cell culture.
8	Preparation of metaphase chromosomes from cultured cells
9	Isolation of DNA and demonstration of apoptosis and DNA laddering.
10	MTT assay for cell viability and growth
11	Cell fusion with PEG

Teacher - Prof. Zahabiya Saifee

Ν	/Iaharaja Ra	njit Singh College of Professional Sciences, Indore	
Department of Biosciences			
	Lesson I	Plan - M. Sc. I Biotechnology (July 2019 -Dec 2019)	
		Subject - Biochemistry	
	** •.	Teacher - Dr. Sadhna Nighojkar	
Day/Lecture	Unit	Topic	
1		Amino acids-Structure and functional group properties	
2		Amino acids-Structure and functional group properties	
3		Peptides and covalent structure of proteins	
4 5		Elucidation of primary and higher order structures Elucidation of primary and higher order structures	
6		Evolution of protein structure	
7	Ι	Evolution of protein structure	
8		Structure-function relationships in model proteins-Ribonuclease A	
9		Structure-function relationships in Myoglobin, Hemoglobin,	
10		Structure-function relationship in Chymotrypsin	
11		Tools to characterize expressed proteins	
12		Tools to characterize expressed proteins	
13		Enzyme catalysis-general principles of catalysis	
14		Enzyme catalysis-general principles of catalysis	
15		Quantitation of enzyme activity and efficiency	
16		Enzyme characterization and Michaelis-Menten kinetics	
17		Enzyme characterization and Michaelis-Menten kinetics	
18		Relevance of enzymes in metabolic regulation, activation, inhibition	
	II	and covalent modification	
19		Relevance of enzymes in metabolic regulation, activation, inhibition	
		and covalent modification	
20		Relevance of enzymes in metabolic regulation, activation, inhibition	
21		and covalent modification	
21		Single substrate enzymes	
22 23		Single substrate enzymes Sugars-mono, di, and polysaccharides	
23		Sugars-mono, di, and polysaccharides	
24		Functions of carbohydrates-Cellular structure, energy storage,	
25		signalling,	
		Functions of carbohydrates-Cellular structure, energy storage,	
26		signalling,	
27	Ш	Glycosylation of other biomolecules-glycoproteins and glycolipids	
28		Glycosylation of other biomolecules-glycoproteins and glycolipids	
20		Lipids-structure and properties of important members of storage and	
29		membrane lipids	
30		Lipids-structure and properties of important members of storage and	
50		membrane lipids	
31		Lipid organization, Lipoproteins	
32		Biomembrane organization-sidedness and function	
33		Membrane-bound proteins-structure, properties and functions	
34		Membrane-bound proteins-structure, properties and functions	
35		Phase-transitions in lipids, polysaccharides	
36	IV	Molecular shapes and conformation	
37		Comparison between different membrane models	
38		Diffusion, Permeability, Carrier transport, ion transport	
<u>39</u> 40		Active and Passive transport, ion pumps, water transport	
40		Use of liposomes for membrane models and drug delivery systems	
41		Bioenergetics-basic principles, Concept of equilibria and free energy	
42		Coupled processes, Glycolytic pathway, Kreb's cycle	
42		Oxidative phosphorylation, Photosynthesis	
44		Photosynthesis, Elucidation of metabolic pathways	
45	v	Logic and integration of central metabolism	
46	·	Entry/exit of various biomolecules from central pathways	
47		Entry/exit of various biomolecules from central pathways	
48		Principles of metabolic regulation	
49		Regulatory steps, Signals	
50		Signals and second messengers	
· · · ·

31		Factors affecting microbial growth		
32		Factors affecting microbial growth		
33		Factors affecting microbial growth		
34		Host-pathogen interactions		
35		Host-pathogen interactions		
36		Mechanism of pathogenesis		
37		Mechanism of pathogenesis		
38		Mechanism of pathogenesis		
39 Un	nit 4	Mechanism of pathogenesis		
40		Pathogenecity islands and their role of virulence		
41		Pathogenecity islands and their role of virulence		
42		Toxins and their types		
43		Toxins and their types		
44 45		Toxins and their types Toxins- structure and mode of action		
45		Viruses		
40		Classification of bacterial, plant and animal viruses		
48		Classification of bacterial, plant and animal viruses		
48		Classification of bacterial, plant and animal viruses		
50		Classification of bacterial, plant and animal viruses		
	nit 5	Statellite virus		
52		Viroids, Virusoids		
53		Classification and general features of fungi		
54		Classification and general features of fungi		
55		Life cycle of Penicillium		
56		Life cycle of Saccharomyces		

Maharaja Ranjit Singh College of Professional Sciences, Indore		
		Department of Biosciences
	Les	sson Plan - M. Sc. I Biotechnology (July 2019 - Dec 2019)
		Paper-IV-Biostatistics and Bioinformatics
		Teacher -Nikita Chordia/ Dr. Pratibha Tiwari
Day/Lecture	Unit	Торіс
1		Fundamental concepts in Applied probability
2		Probability and analysis of one and two way samples
3		Discrete probability models
4		Continuous probability models
5		Continuous probability models
6		Expectation and variance
7		Expectation and variance, Central Limit Theorem
8		Inference, hypothesis
9		Critical region and Error probabilities
10	Ι	Tests for proportions
11		Tests for proportions
12		Equality of proportions
13		Equality of proportions
14		Equality of means of normal population (variance known)
15		Equality of means of normal populations (variance unknown)
16		Chi-square test for independence
17		P-value of the statistic, Confidence-limits
18		Introduction to one- and two-way analysis of variance
19		Data transformation
20		Elements of programming languages- C and PERL
20		Elements of programming languages- C and PERL
22		Database concept, Database management system
23		Database concept, Database management system
23		Database concept, Database management system
24	П	Database browsing and data retrieval, Sequence database and genome database
25		Data structures and databases, GenBank, EMBL, DDBJ databases
26		Swissprot, PIR, MIPS databses
27		Hovergen, TAIR, PlasmoDB, ECDC databases
28		Searching sequence databases using FASTA and BLAST algorithms
29		Searching sequence databases using FASTA and BLAST algorithms
30		Cluster analysis
31		Phylogenetic clustering by simple matching coefficients
32		Sequence comparison, Sequence pattern
33		Regular expression based patterns
34	Ш	Theory of Profiles and their use in sequence analysis
35		Markov models, concept of HMMS
36		Baum-Welch algorithm
37		Use of Profile HMM for protein family classification
38		Pattern recognition methods
39		Pattern recognition methods
40		Goals of Microarray experiments
41		Normalization of Microarray data
42		Detecting differential gene-expression, Principal component analysis
43		Clustering of microarray data
44	IV	Structure determination by X-ray crystallography
45		Structure determination by X-ray crystallography
46		Structure determination by NMR spectroscopy
47		Structure determination by NMR spectroscopy
48		Protein Data Bank (PDB) and Nucleic acid Data Bank (NDB),
49		Methods for modelling: Homology modelling
50		Homology modelling,
51		Threading, Protein structure prediction
52		Protein structure prediction
53	X 7	Structure-structure comparison of proteins
54	V	Force-fields
55		Molecular energy minimization
56		Molecular energy minimization
57		Monte carlo and Molecular dynamics simulations
58		Molecular dynamics simulations
	1	

Department of Biosciences

Lesson Plan - M. Sc. I Biotechnology (July 2019 - Dec 2019)

Subject - Practical 1 Paper I-Biochemistry Paper II-Cell Biology

Teacher - Dr. Mukesh / Dr. Monica jain

Day/Lecture	Торіс
1	To prepare an Acetic-NaAcetate Buffer system
2	Standard graph of BSA using UV-Vis Spectrophotometer
3	Validating the Beer- Lambert's Law.
4	Separation of aliphatic, aromatic and polar amino acids by TLC
5	Nelson Somogyii's and DNS method.
6	Determination of enzyme activity
7	Studying the effect of temperature, pH on enzyme activity
0	Studing the effect of enzyme concentration & substrate concentration on
8	enzyme activity.
9	Isolation of biomolecules from natural sources.
10	Microscopy: Bright field, phase contrast and fluorescence microscopy
11	Microtomy.
12	Subcellular fractionation and marker enzymes
13	Histochemical techniques.
14	Mitosis and Meiosis.

Department of Biosciences

Lesson Plan - M. Sc. I Biotechnology (July 2019 - Dec 2019)

Paper

Subject - Practical 2

I-Microbiology

Paper II-Biostate and Bioinformatics

Teacher - Dr. Sheetal Bhasin / Nikita Chordia

Day/Lecture	Торіс
1	Sterilization, disinfection, safety in microbiological laboratory
2	Preparation of media for growth of various microorganisms
3	Identification and culturing of various microorganisms.
4	Staining and enumeration of microorganisms
5	Growth curve, measure of bacterial population by turbidometry
6	studying the effect of temperature, pH, carbon and nitrogen.
7	Isolation and identification of fungus
8	Isolation of bacteriophage.
9	Introduction to MSEXCEL-Use of worksheet to enter data
10	Use of in-built statistical functions for computations of Mean, S.D.,
11	Correlation, regression coefficients
12	Use of bar diagram, histogram, scatter plots, etc.
13	Graphical tools in EXCEL for presentation of data.
14	Introduction to SYSTAT package.
15	Searching PubMed
16	Introduction to NCBI, NCBI data bases
17	BLAST BLASTn, BLASTp, PSI-BLAST,
18	Sequence manipulation Suite, Multiple sequence alignment,
19	Primer designing, Phylogenetic Analysis.
20	Protein Modeling, Protein structure Analysis, Docking, Ligplot interactions
21	Docking, Ligplot interactions

Maharaja Ranjit Singh College of Professional Sciences, Indore				
		Department of Biosciences		
	Lesson P	lan - M. Sc. I Biotechnology (July 2019 -Dec 2019)		
		Subject - Enzyme Technology		
D /I /	T T •4	Teacher - Dr. Sadhana Nighojkar		
Day/Lecture	Unit	Topic		
1		Introduction to enzymology		
2		Historical developments in enzymology		
3		Enzyme classification		
4	I	IUBMB enzyme classification		
5		Techniques of enzyme isolation		
6		Principle and techniques of enzyme assay		
7		Factors affecting enzyme activity		
8		Factors affecting enzyme activity		
9		Intracellular localization of enzymes		
10		Mechanism of Enzyme Action		
11		Investigation of active site		
12		Enzyme activators		
13	II	Co-enzymes and co-factors in enzyme catalysis		
14		Techniques of separation		
15		Purification of enzyme		
16		Purification of enzyme		
17		Test of homogeneity		
18		Enzyme Kinetics		
19		Bioenergetics and Catalysis		
20		Equilibrium kinetics		
21		Steady state kinetics		
22	III	Significance of Km, Vmax & Kcat.		
23		Significance of Km, Vmax & Kcat.		
24		Multisubstrate reaction kinetics : General rate equation		
25		Ordered, random order equation		
26		Ping-pong mechanisms		
27		Enzyme inhibition and its kinetics		
28		Reversible and irreversible inhibition		
29		Competitive, non-competitive and uncompetitive inhibition		
30		Mixed & partial inhibition		
31	IV	Substrate inhibition		
32		Effect of temperature on reaction rate		
33		Enzyme stability		
34		Arrhenius equation		
35		Activation energy		
36		Allosteric enzymes and sigmoidal kinetics		
37		Co-operativity		
38		MWC & KNF models		
39				
40	v	Enzyme memory and pneumonical enzymes.		
40 41	v	Isoenzymes		
		Multienzyme complex & their physiological significance		
42		Multifunctional enzymes & their physiological significance		
43		Biosensors ; Enzymes as analytical reagents		
44	<u> </u>	Ribozymes and catalytic antibodies		

Mahar	aja Ran	jit Singh College of Professional Sciences, Indore		
		Department of Biosciences		
Lesson Plan - M. Sc. I Biotechnology (July 2019 - Dec 2019)				
		Subject - Food Biotechnology		
		Teacher - Fatema Matkawala		
Day/Lecture	Unit	Торіс		
1		Biotechnology in relation to food industry		
2		Nutritive value of food		
3		Nutritive value of food		
4	Unit 1	Types of microorganisms associated with food		
5		Types of microorganisms associated with food		
6		Types of microorganisms associated with food		
7		Types of microorganisms associated with food		
8		General principles of food preservation		
9		Bioprocessing of meat		
10		Bioprocessing of meat		
11		Bioprocessing of fisheries		
12		Bioprocessing of vegetables		
13		Bioprocessing of dairy products		
14	Unit 2	Bioprocessing of dairy products		
15	l	Enzymes used in food processing		
16		Enzymes used in food processing		
17		Chemicals used in food processing		
18		New Preservation Technologies		
19		New Preservation Technologies		
20		New Preservation Technologies		
21		Microbial spoilage of food		
22		Microbial spoilage of food		
23		Microbial spoilage of food		
24		Microbial spoilage of food		
25	Unit 3	Food infenctions - Gastroenteritis		
26		Food infenctions - Salmonellosis		
27		Food infenctions - Shigellosis		
28		Food intoxications- Botulism		
29		Staphylococcal intoxication		
30		Mycotoxins		
31		Fermented dairy products		
32		Fermented dairy products		
<u>33</u> 34		Fermented dairy products		
-		Non-beverage plant products		
35 36		Non-beverage plant products		
30		Beverages Beverages		
37	Unit 4	Beverages		
39	Cint +	Beverages		
40	1	Baked products		
40	1	Baked products		
41 42	1	Single cell proteins		
42	1	Single cell oils		
43	1	Probiotics and Prebiotics		
44 45		Probiotics and Prebiotics Probiotics and Prebiotics		
45		Microbiological examination of food		
40	1	Microbiological examination of food		
48	1	Microbiological examination of food		
48	1	Quality assurance		
50	1	Quality standards of food		
51	Unit 5	Government regulatory practices and policies		
52	Om 5	Government regulatory practices and policies		
53	1	FDA		
54	1	FDA		
55	1	Food hygiene		
56		EPA, HACCP, ISI		
50	1			

Mahara	aja Ranj	it Singh College of Professional Sciences, Indore
		Department of Biosciences
		Plan - M. Sc. I Biotechnology (July 2019 - Dec 2019)
		Subject - Enviornmental Biotechnology
		Teacher - Zahabiya Saifee
Day/Lecture	Unit	Торіс
1		Environment: Basic concept
2		Environment: Issues
3		Pollution: Types of pollution
4		Pollution: Types of pollution
5	1	Pollution: Methods for measurement of pollution Pollution: Methods for measurement of pollution
7	1	Pollution: Methods for measurement of pollution
8		Methodology for environment management
9		Methodology for environment management - Problem solving Ap.
10		Limitations of enviornmental management
11		Air pollution - Introduction
12		Air pollution - Control through biotechnology
13		Air pollution - Control through biotechnology
14		Water as scarce natural resources
15		Need for water management
16	2	Measurement of water pollution
17		Measurement of water pollution
18		Source of water pollution
19		Waste water treatment: Physical and Chemical
20		Waste water treatment: Biological
21 22	-	Microbiology of waste water treatment Microbiology of waste water treatment
22		Aerobic process: Activated sludge
23		Aerobic process: Activated studge Aerobic process: Oxidation ditches and Trickling filter
25		Aerobic process: Towers and Rotating disc
26		Aerobic process: Rotating drums and Oxidation ponds
27		Anaerobic digestion and anaerobic filters
28	3	Up flow anaerobic sludge blanket reactor
29		Treatment schemes for waste water of dairy
30		Treatment schemes for waste water of distillery
31		Treatment schemes for waste water of Tannery
32		Treatment schemes for waste water of Sugar
33		Treatment schemes for waste water of Antibiotic
34		Microbiological degradation of xenobiotic in Environment
35		Microbiological degradation of xenobiotic in Environment
36		Microbiological degradation of xenobiotic in Environment
37		Ecological consideration
38 39	4	Decay behavior
39 40		Degradative plasmid Hydrocarbons
40		Oil pollution
41 42		Surfactants
43		Pesticides
44		Bioremediation Introduction
45		Bioremediation of contaminated soils
46		Bioremediation of waste land
47		Biopesticides in integrated pest management
48		Biopesticides in integrated pest management
49		Soil waste source and management - Composting
50	5	Soil waste source and management - Vormiculture
51		Soil waste source and management - Methane production
52		Global environmental problems
53		Ozone depletion
54		UV-B and Green house effect
55		Acid rain and their impact
56		Biotechnological approaches for management

	Lesson Plan	Department of Biotechnology - M. Sc. I Biotechnology (July 2019 -Dec 2019)
	Lesson Fian	Subject - Biotechnology
		Teacher - Dr. Monica Jain
Day/Lecture	Unit	Topic
1		Introduction to cell and Tissue Culture
2		Tissue culture media (composition and preparation)
3		Tissue culture as a technique to produce novel plants and
		hybrids Tissue culture as a technique to produce novel plants and
4		hybrids
E		Initiation and maintenance of callus and suspension culture;
5		single cell clones
6		Initiation and maintenance of callus and suspension culture;
7		single cell clones
8		Organogenesis somatic embryogenesis
9		Transfer and establishment of whole plants in soil.
10		Shoot-tip culture: rapid clonal propagation and production of
10	I	virus-free plants.
11	-	Shoot-tip culture: rapid clonal propagation and production of
		virus-free plants.
12		Embryo culture and embryo rescue.
13		Protoplast isolation, culture and fusion; selection of hybrid cells
14		Protoplast isolation, culture and fusion; selection of hybrid cells
15		Regeneration of hybrid plants; symmetric and asymmetric
		hybrids, cybrids.
16		Regeneration of hybrid plants; symmetric and asymmetric
		hybrids, cybrids. Anther pollen and overy culture for production of henloid plan
17		Anther, pollen and ovary culture for production of haploid plan and homozygous lines.
10		Anther, pollen and ovary culture for production of haploid plan
18		and homozygous lines.
19		Plant transformation Technology: basis of tumor formation,
		hairy root
20 21		Features of Ti and Ri plasmids
		Mechanisms of DNA transfer, role of virulence genes Use of Ti and Ri as vectors, binary vectors, use of 35S and other
22		promoters,
23		Genetic markers
24		Use of reporter genes with introns, use of scaffold attachment
		regions
25	П	Methods of nuclear transformation
26		Viral vectors and their application, multiple gene transfers
27		Vectors-less or direct DNA transfer, particle bombardment,
27		electroporation, microinjection, transformation of monocots.
		Vester les estimat DNA transfer antistate bande administ
28		Vectors-less or direct DNA transfer, particle bombardment, electroporation, microinjection, transformation of monocots.
29 30		Transgene stability and gene silencing.
30		Chloroplast transformation: Vectors, advantages. Chloroplast transformation: Vectors, advantages.
		Application of plant Transformation for productivity and
32		performance
33		Herbicide resistance
34		Herbicide resistance
35		Insect resistance
36 37		Insect resistance
38	ш	Virus resistance Virus resistance
39		Disease resistance, nematode resistance
40		Abiotic stress, post-harvest losses
41		Long shelf life of fruits and flowers
42		Long shelf life of fruits and flowers
43 44		Male sterile lines, bar and barnase systems Male sterile lines, bar and barnase systems
44		Male sterile lines, bar and barnase systems Metabolic Engineering and Industrial Products
45		Plant secondary metabolities
47		Plant secondary metabolities
48		Control mechanisms and manipulation of phenyl propanoid
		pathway
40		Control mechanisms and manipulation of phenyl propanoid
40		
49	IV	pathway
	IV	
49 50	IV	pathway Shikimate pathway; alkaloids Shikimate pathway; alkaloids Polyhydraxybutyrate
49 50 51 52 53	IV	pathway Shikimate pathway; alkaloids Shikimate pathway; alkaloids Polyhydraxybutyrate therapeutic proteins

Lesson Plan - M. Sc. I Biotechnology (July 2019 - Dec 2019)	
Subject - Practical 1 Paper	
I-Environmental Biotechnology	
Paper II-Plant Biotechnology	
Teacher - Dr. Sheetal Bhasin/ Dr. Monica jain	
Day/Lecture	Topic
1	Preparation of media
2	Surface sterilization.
3	Organ Culture.
4	Callus propagation, organogenesis, transfer of plants to Soil.
5	Protoplast isolation and culture
6	Anther culture
7	Production of Haploids
8	Cytological examination of regenerated plants.
9	Agro bacterium culture, selection of transformants, reporter gene (GUS) assays.
10	Preparation of tissue culture medium and membrane filtration
11	Area monitoring
12	Analysis of air
13	Qualitative and quantitative analysis of sewage
14	Qualitative and quantitative analysis of water
15	Qualitative and quantitative analysis of soil
16	MPN analysis of water/ sewage sample
17	Isolation of rhizobium fromroot nodules
18	Isolation of azatobator from soil
